

3. Filipov

- 2C – cutting twice per year with biomass removal
 - 1M – mulching once per year
 - 2M - mulching twice per year
 - 3M - mulching thrice per year
 - U – unmanaged treatment
- Experiment was established in 2000
 - On *Arrhenatherion* meadow
 - Overall 4 randomized blocks (20 plots)
 - Each plot has rectangle shape 10 x 5 m
 - Vegetation is observed from the area 1 m²
 - Dominant species before the beginning of experiment were: *Dactylis glomerata*, *Festuca pratensis*, *Phleum pratense*, *Galium album* and *Veronica chamaedrys*

Plan of the experiment
